EDUCATION

UBT - University for Business and Technology | Pristina, KS — October 2025 -Jun 2028

Computer Science and Engineering

EXPERIENCE

AI Engineer | Starlabs — October 2025 - January 2026

- Developed and deployed a **Retrieval-Augmented Generation** (**RAG**) pipeline, focusing on embeddings, retrieval optimization and model reliability to power an AI-driven educational platform.
- **Fine-tuned a local LLM** to improve task-specific performance, working with Hugging Face Transformers and the OpenAI API.
- Built and tested **FastAPI endpoints** to serve AI model outputs in a production environment.

Penetration Testing / AI Security | *Pretera* — March 2026 - May 2026

- Identified and exploited **OWASP Top 10** vulnerabilities (SQLi, XSS, CSRF, SSRF, XXE, SSTI, access control) in web apps using Burp Suite, and Kali Linux, per the PortSwigger BSCP methodology.
- Authored formal vulnerability finding reports with reproduction steps and remediation guidance, including LLM-specific attack vectors.

Full Stack Web Developer | Freelance — Jun 2023 - Present

- Built and shipped responsive web apps for **6**+ clients with **TypeScript, React, Angular, and Tailwind**, building reusable component-based UIs.
- Designed and integrated **REST APIs** and database-backed features (**Node.js, PostgreSQL**), and deployed full-stack apps to production with Git-based workflows.

PROJECTS

Agentic CRAG — 2026

- Build a self-correcting **Corrective RAG** pipeline as a stateful **LangGraph** multi-agent graph that grades its own retrieval and retrieves weak queries before falling back to live web search, eliminating silent hallucinations.
- Engineered retrieve, evaluate, rewrite, and verify agents with score-based routing and post-generation groundedness check to guarantee answers are backed by source documents.
- Stack: **LangGraph**, **Groq** (**Llama 3.3 70B**), **Qdrant**, **FastEmbed**, **FastAPI**, **Tavily**, **LangSmith**, **Docker.**

ADDITIONAL EXPERIENCE

Junction | *Europe's largest hackathon, Finland* — 2024

- Selected as a challenge winner at Junction, Made aava match, A platform to get matched with jobs with AI by swiping

Healathon | *Healthcare Hackathon (Swiss TPH/ IHS)* — 2026

- Won 1st place with a VR exhibition on non-communicable diseases, built and pitched under a 48-hour deadline.

TECHNICAL SKILLS

- **Programming Languages:** Python, TypeScript, Javascript.
- **Tools and Technologies:** NumPy, Pandas, Jupyter Notebook, Git, Docker, REST APIs, n8n.
- **AI/ Machine Learning:** ML, Model Evaluation, Feature engineering, RAG, Vector Databases.
